Static Sensor

產品特色 Features

實現線上即時靜電管理 Achieve on-line static management

無需在靜電的測量和管理方面花費工時，即可適時監視肉眼無法看見的靜電。
可通過適時監視來針對那些便攜式測量器難以測量的地方進行靜電管理。

A solution for timely monitoring the invisible static electricity which can replace man-hour with PC to measure and manage the static electricity. Via the static electricity management can be carried out for the place that is hard to timely monitoring by the portable measuring instrument.

簡易操作、輕鬆設定 Simple operation, Easy setting

採用一體化設計，具備判定輸出和異常輸出功能。
無需通過放大器等設備即可直接連接外部控制設備，節省總體空間。
Through integrated design, the static sensor could tell the output and abnormal output without amplifiers, to achieve saving space.

具有「數位輸出」和「類比輸出」兩種電壓數據 Two kinds of data: "digital output" and "analog output"

可以選擇與控制裝置之間的連接方式可以用做面向外部的判定輸出，或是利用電腦進行歷史記錄管理等。
You can choose the connection method with external control device, which can be used as judgment output or use a computer to manage history records.

判定輸出功能 Judgment output function

一旦超過設定電壓（臨界值），便會通過傳感器LED和電壓比較輸出（判定輸出）發出通知。
Sensor will send a notification through the LED and the voltage comparison input (judgment output) when setting voltage value is exceeded (threshold value).

歸零鍵功能 Zero key function

利用歸零鍵，可以將當前的測量值調整為0V。
Using the zero key, the current measured value can be adjusted to 0V.

測量距離 Measuring distance

測量距離和電壓範圍

Measuring distance and voltage range

電壓範圍和解析度根據測量模式而變化。根據測量對象的電荷量設置測量距離。

The voltage range and resolution vary according to the measurement mode.
Set the measurement distance according to the charge amount of the measurement object.

測量距離 Measuring Distance (mm)	高精度模式 High Voltage Mode		標準模式 Standard Mode	
	範圍 Range(KV)	解析度 Resolution(V)	範圍 Range(KV)	解析度 Resolution(V)
10、25、40	±2.000	1	±20.00	10
60、100			±20.00	10

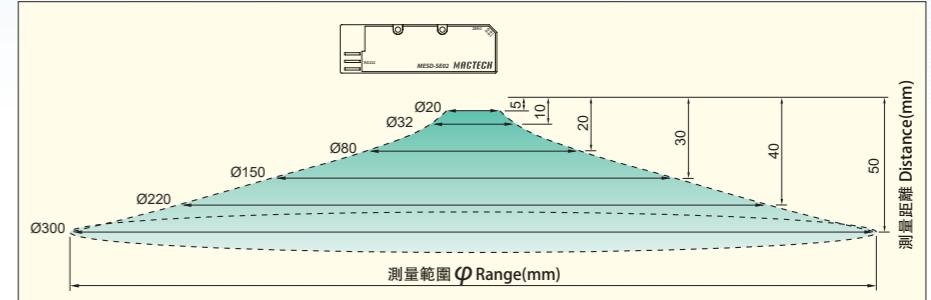

*解析度是在測量超出測量範圍的物體時。如果被測物體小於測量範圍，則通過設置工作尺寸來輸出校正後的電荷量，但是解析度變粗糙。

另外，當充電量在±50V範圍內（在標準模式下為±500V）時，解析度比上表要粗糙。
Resolution is when measuring an object that exceeds the measurement range. If the object being measured is smaller than the measurement range, the workpiece size can be set to compensate the amount of static charge that is output, but the resolution will degrade.
Also, the resolution degrades at ±50V or below. (High voltage mode: ±500V or below)
